Over the past month there has been talk on Facebook & other places as what an ABC current member can do to try to increase the membership in the Airheads Beemer Club(ABC). Several years ago, I placed a business card template on the ABC website, but I noticed recently that it was corrupted and needed to be updated to current standards. The attached template is what I have developed to replace it.

Before doing anything, you need to download it to your computer, save it, and then you can add your information to the three areas on the front side. Then save the completed template with a file name.

You can purchase a packet of Avery 8371 or 5371 Business Cards (250 per pack) for less than $15 from your favorite office supply.

I'd like to see people place a card on any airhead they come across in their travels. There are more airhead owners/enthusiasts out there than the ABC has as members. Interaction with others can make a big difference.

The biggest problem I have had over the years is with the printer I had at the time. I had several different H-P printers which had problems, but since I purchased an Epson 2760 six years ago, printing the thicker stock paper on both sides has not been a problem. In addition, the ink lasts much longer (like years). There may be other printers that do not have any problems also.

TO PRINT A SHEET of 10 CARDS

Layout = Portrait

Pages – All

Print Both Sides & Flip on the Long Edge

Color = B/W

Print = Actual Size (Important)

The results will be a sheet of 8371 or 5371 Business Card Stock printed on both sides in the proper available areas front and back. All you need to do next is separate the cards from the printed template.

Let me know if you have any problems.

David Cushing
